Press Release Body: Atlanta, GA January 11, 2008

Increasing usage of emails has amplified problems like spam's, mail worms, root-kit and phishing techniques. However with increasing popularity of emails and Windows, the usage of Outlook has increased drastically and also have raised the causes which corrupt Outlook email archives (both .pst and .ost), more over increasing usage makes the pst file size larger, and hence the need for a powerful [PST Repair tool](#) arises.

Common .pst or .ost corruption causes reported on various UseNet's and knowledge base of Microsoft.

- Corruption caused due to 2 GB .pst file size limit.
- Corruption of .pst file when used over network.
- Accidentally deleted messages, contacts and notes.
- Corruption inside the .pst file header.
- Corruption caused due to compacting of .pst file.
- Incomplete recoveries of .pst file by data recovery software due to

fragmentation.

- "0x80040119" and "Unknown error"

Imagine losing all your emails, contacts, notes, schedules, journals, events. The first thing which comes to mind is to use scanpst an Inbox repair tool which comes bundled with Office suite. However scanpst has a standard way of performing diagnostics on .pst file which includes rearranging blocks containing identification numbers with respect to CRC. Scanpst fails when there is a severe corruption inside a .pst file which includes complete file CRC error and many other causes.

Disk Doctors Outlook Mail Recovery (.pst) is a complete [PST Repair tool](#) which:

- Supports recovery of emails, notes, tasks, calendar, journal and contacts. This application supports repair of .pst file from MS-Outlook 2000, XP, 2003 and 2007 versions.
- Recovers mail messages in plain text, RTF and HTML. Recovers attachments, including the documents and images attached to messages and embedded in HTML bodies.
- Recovers embedded objects, such as Excel Worksheets, Word documents, etc..
- Recovers .pst files larger than 2 GB.
- It can recover password protected .pst files, even if you don't have the password. Both compressible encryption and high encryption (or best encryptions) are supported.

Latest version of the software supports repair from extremely large .pst files, as per the documents published by Microsoft the maximum size a .pst file can attain 20 GB size.
