Industry: [Internet & Online](#)

Easyspace, one of the largest [web hosting](#) and domain name providers in the UK, is now offering the popular .TEL domain extension during its General Availability launch stage. Having just complete its Sunrise and Landrush launch periods, the .TEL has proven to be a highly sought after extension, generating several thousand sales despite the premium price attached to it during those phases. The .Tel domain name Landrush period closed (and general availability opened) at 11.59pm, Monday 23rd March. As part of the transition, pricing and registration restrictions have changed, with the cost dropping to just £12.50 and minimum registration term dropping to just 1 year. Extended registrations are available up to 10 years. The .Tel is a new Top Level Domain (TLD) which enables individuals and businesses to store, updated and publish all contact details, web links and keywords directly on the internet under one unique .Tel domain name. The .Tel extension offers an integrated solution for all communication listings giving unlimited control over how and when users are contacted. Easyspace.com is one of only a handful of UK based [domain name](#) registrars who offered the .Tel domain name during its Landrush period, and is one of only a handful to offer it during General Availability.

"The .Tel extension received a massive response during its Landrush launch period despite the premium price attached to it. With that in mind, we're expecting even more interest now that the price and minimum registration terms have reduced so significantly as part of the transition from Landrush to General Availability." comments Errol Vanderhorst, Sales and Marketing Director for Easyspace.
