

Datacraft Solutions, Inc. Announces Automated “Enhanced Printing” Feature in its Industry-Leading Digital Kanban Software-as-a-Service Solution

Released on: February 15, 2010, 7:19 am

Author: Brian Gullette

Industry: [Small Business](#)

(Durham, N.C.) Datacraft Solutions, Inc., the industry leader in demand driven supply chain collaboration solutions, announced today that it has released a new “Enhanced Printing” feature to its web-based Software-as-a-Service (SaaS) solution for inventory replenishment and order management. This new feature is built into the “Signum” product suite and provides Datacraft customers with added flexibility, ease of use and configurability in further automating printing functions related to inventory flow through the [supply chain](#).

“Enhanced printing” in Signum provides users with the ability to manage printers on the local area network and selectively associate them with individual user profiles. Productivity enhancements include: one-click Receiving Card printing; multiple-copy Receiving Card print

options; unique Production Card template assignment at the card-set level; and reprint capabilities for Receiving Cards and "spike" cards.

"We are proud to work with the world's premiere lean leaders to advance and sustain business practices that generate outstanding financial returns," said Stephen Parker, CEO of Datacraft. "We are constantly at work refining and improving our world-class collaborative replenishment network solution. This new addition to Signum is customer-driven and will deliver even further productivity gains to our customers' plants."

Through Datacraft's Software-as-a-Service offering, internal consumption of inventory is optimized and communicated in real-time throughout the supply chain. Signum is an automated digital supply chain technology that reduces [inventory](#) levels, increases productivity, continually improves process flow and provides realtime, visual and collaborative communication in the supply chain. Signum is delivered securely over the Internet without the need to install and maintain complex, expensive IT hardware and software infrastructure.

About Datacraft Solutions

Datacraft Solutions provides technology and services to cost-effectively streamline the supply chain replenishment process with a secure web-based Software-as-a-Service (SaaS) solution. Seamlessly integrating with back office systems, Datacraft's "electronic Kanban" solution delivers immediate visibility to manufacturers' supply chains, leveraging technology to better manage inventories, improve inventory turns, reduce lead times, enhance ERP transaction accuracy, and build lasting, effective partnerships with key customers and suppliers.
