

# SmartFile Release Makes PC Backups Easy, Efficient, and Portable

Released on: April 13, 2010, 12:03 am

Author: Dave Scott

Industry: [Internet & Online](#)

SmartFile stands alone with its multifunctional platform, being the first online [file storage](#) company to offer a secure PC backup solution as part of its suite of online storage and file sharing software.

SmartFile, a market leader in FTP, [Online Storage](#), File Sharing, File Upload, and File Backup services, has strengthened its presence with the release of SmartBackup - an application designed to provide a secure, seamless, and efficient way to backup your PC files.

Offered at no additional cost with any SmartFile account, SmartBackup gives users full control over the backup process. Users control which files to backup, which files to ignore, and when the backups will occur. In addition, SmartBackup lives up to its name by running a sophisticated deduplication process, preventing users from inadvertently creating more than one copy of the same file. Even if you have multiple PC's and external storage devices, SmartBackup allows you to select and schedule all of these for backup to a single SmartFile account. After a backup has been created, users can restore these files to any PC with an Internet connection.

For more information or to sign up for a SmartBackup trial, please visit <http://www.smartfile.com>

## About

## SmartFile

SmartFile is a market leader in [digital asset management](#), FTP Hosting, online file storage, file upload, file sharing and file delivery.
