Quality Assurance Solutions focuses on creating and selling products that help companies setup quality assurance systems and quality control processes. Quality Assurance Solutions provides specialized content, instructions, and education to help individuals improve their company's quality assurance program. [Quality Assurance Solutions website](#) contains extensive information on quality management standards, quality management tools, and quality management systems.

Quality Assurance Solutions announces the release of Snap Sampling Plans! software for establishing sampling plans for inspection quality control. Every manufacturing company needs to inspect product to assure the product meets requirements. The inspection stages within a company include receiving inspection, in-process inspection, and final inspection. [Snap Sampling Plans!](#) easily creates these sampling plans.

When inspecting for a given feature, companies rely on sampling inspection instead of 100% inspection to reduce costs. From the inspection results, the company decides whether to accept or reject the inspected parts.

Determining the inspection plan is a complicated process. One must answer many questions prior to selecting the appropriate sampling method. In addition, the person creating the plan must understand statistical sampling. One must consider these items because they all affect the inspection plan.

- The Manufacturing process
- The location of the inspection
- The acceptance parameters
- The type of defect
- The inspection feature
- Destructive testing
- The Inspection cost

- The Inspection level
- AQL sampling
- Numerous other elements.

To simplify this process and assure businesses use the most appropriate sampling plan, Quality Assurance Solutions released [Snap Sampling Plans!](#) Companies use this software to quickly implement proper statistical sampling.

Businesses selected Snap Sampling Plans! for these reasons

- Easy to implement.
 - No statistical training needed.
 - Prevents businesses from using the incorrect inspection plan.
 - Allows for advance comparison of multiple inspection plans.
 - Built in tables from multiple leading attribute sampling plans.
- Inexpensive, one step download, and easy to install.

Video of the software can be found [here](#).

Quality Assurance Solutions offers several unique [Quality Assurance products](#) that include software, training videos, and management systems templates. Specialized items include 8D Manager, SPC training video, Data Analysis training video, Quality Assurance Manual and Calibration System Manual.
